Work Experience

Java Backend Developer with 2.5+ years of experience in designing and developing scalable distributed backend systems and digital payment solutions. Proficient in Spring Boot, Microservices Architecture, and AWS Cloud services with hands-on experience in secure HCE/SE wallet systems. Experienced in integrating Visa and Mastercard payment platforms, implementing PCI-DSS compliant security standards, and building high-performance, event-driven backend applications.

Experience Summary

Girmiti Software Pvt. Ltd. *Software Engineer Trainee - Dev*

Jan 2024 – Present

Client: Infineon Technologies India Pvt. Ltd.

Project: Digital Wallet (Secure Element - SE)

- Developed backend microservices and REST APIs using **Spring Boot** for card tokenization, lifecycle management, and wearable device integration.
- Improved API performance and reduced response time by implementing **Redis caching** for frequently accessed data.
- Implemented secure service-to-service communication using **Spring WebClient** with mTLS authentication for Mastercard integration, ensuring reliable external API communication.
- Built secure authentication and authorization using **Spring Security** integrated with **AWS Cognito**.
- Integrated Visa and Mastercard payment APIs for card tokenization, authorization, and transaction lifecycle management.
- Implemented centralized logging, validation, and exception handling using **Spring AOP**, improving traceability and debugging efficiency.
- Improved backend performance and maintainability through code refactoring, optimization, and modular service design.
- Worked collaboratively in an Agile team environment, participating in sprint planning, code reviews, and daily stand-up meetings to ensure timely project delivery.
- Coordinated with Application, UI, QA, and DevOps teams for smooth backend API integration, issue resolution, and end-to-end feature implementation.
- Contributed to team knowledge sharing and collaborative problem-solving by assisting in debugging, production support, and technical discussions.
- Used **AI-assisted** development tools to improve productivity, code quality, and debugging efficiency.

Client: Reliance Jio Infocomm Ltd.

Project: Digital Wallet (HCE)

- Migrated monolithic application to microservices architecture using **Java 17** and Spring Boot, improving scalability and modularity.
- Designed and implemented REST APIs for device onboarding, wallet provisioning, and HCE-based validation workflows in a distributed system.
- Implemented Factory Design Pattern for dynamic payment routing based on BIN/PNO, improving flexibility and maintainability.
- Improved system reliability by implementing unit and integration testing using **JUnit** and **Mockito**.
- Coordinated with Application, UI, QA, and DevOps teams for smooth backend API integration, issue resolution, and end-to-end feature implementation.
- Contributed to team knowledge sharing and collaborative problem-solving by assisting in debugging, production support, and technical discussions.

Projects

Serverless Car Booking Web App (AWS) | [Project Link](#)

- Built a serverless car booking application using AWS Cloud with event-driven architecture for high scalability.
- Implemented backend services using **AWS Lambda** for low-latency and event-driven processing.
- Used **Amazon DynamoDB** for highly available and scalable data storage.
- Integrated secure authentication using **Amazon Cognito**.
- Deployed application on fully managed AWS serverless infrastructure ensuring high availability and fault tolerance.

Microservices-Based E-Commerce Platform | [GitHub](#)

- Developed a scalable microservices-based e-commerce platform using Spring Boot, Spring Cloud, PostgreSQL, React.js, and Docker.
- Built User, Product, Order, and Inventory microservices with Eureka Server for service discovery and Spring Cloud Gateway for centralized routing.
- Implemented secure authentication and authorization using Spring Security, JWT, email-based OTP verification, and password recovery workflows.
- Enhanced observability and security through structured JSON logging with trace IDs and encrypted configuration management using Jasypt.
- Applied RESTful API design, SOLID principles, and microservices best practices to deliver a maintainable, scalable, and responsive application.

Technical Skills

- **Programming Languages:** Java (JDK 8/11/17/21), SQL.
- **Frameworks:** Spring Core, Spring Boot, Spring Security, Spring Data JPA, Spring Cloud Config.
- **Web Technologies:** Servlets, JDBC, RESTful APIs, RMM Level 2, Swagger (API Documentation).
- **Database:** PostgreSQL, JPA/Hibernate, DynamoDB.
- **Caching & Messaging:** Redis, Apache Kafka.
- **Security:** JWT Authentication, Symmetric & Asymmetric Key Encryption.
- **Testing Tools:** JUnit 5, Mockito, WireMock
- **Version Control & Build Tools:** Git, Maven, SonarQube
- **Cloud & DevOps:** AWS EC2, AWS Lambda, AWS Cognito, AWS S3, Docker, CI/CD Pipelines.
- **Cloud & Messaging:** Spring Cloud Bus, Firebase Cloud Messaging (FCM)
- **Monitoring & Logging:** Kibana, Grafana, Log Navigator, CloudWatch.
- **IDE & Tools:** IntelliJ IDEA, Eclipse, Postman, Apache JMeter, VS Code, DBeaver.
- **AI-Assisted Development Tools:** GitHub Copilot, Amazon Q, Cursor, Qodo.

Certifications

AWS Certified Cloud Practitioner 

Education

Aditya University 2019–2023
B.Tech in Computer Science
