

TARUN DEV

Java Backend Developer | Spring Boot | Microservices | AWS | Distributed Systems

Bengaluru, India | +91 9708284829 | devraj8575b@gmail.com | [LinkedIn: linkedin.com/in/tarun-dev-b43757215](https://www.linkedin.com/in/tarun-dev-b43757215) | [GitHub: github.com/tarundev-x](https://github.com/tarundev-x)

PROFESSIONAL SUMMARY

Java Backend Developer with 2.5+ years of experience building scalable backend services, REST APIs, microservices, and cloud-native applications using Java, Spring Boot, Spring Security, Hibernate, PostgreSQL, Redis, and AWS. Experienced in payment integrations with Visa and Mastercard, OAuth2/JWT authentication, distributed system design, API performance optimization, CI/CD, Agile delivery, unit testing, integration testing, and production defect resolution.

TECHNICAL SKILLS

Languages: Java 8/17/21, Core Java, SQL, JavaScript, HTML, CSS

Backend: Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, Microservices, REST APIs, Spring Cloud Config, WebClient

Cloud and DevOps: AWS EC2, S3, ECS, Lambda, API Gateway, Cognito, CloudWatch, Docker, Kubernetes, CI/CD, Maven, Git

Databases and Caching: PostgreSQL, DynamoDB, Redis, HikariCP, database query optimization

Messaging and Integration: Apache Kafka, Firebase Cloud Messaging, Visa APIs, Mastercard APIs, third-party API integration

Security: OAuth2, JWT authentication, role-based access control, AES encryption with Jasypt

Testing and Monitoring: JUnit 5, Mockito, WireMock, Postman, JMeter, SonarQube, Grafana, Kibana, AWS CloudWatch

Tools: DBeaver, VS Code, GitHub Copilot, Amazon Q

PROFESSIONAL EXPERIENCE

Girmiti Software - Software Engineer, Java Backend Developer | Jan 2024 – Present

Project: Digital Wallet - Secure Element | Client: Infineon Technologies

- Designed and developed Spring Boot REST APIs for OEM onboarding, wearable device onboarding, card tokenization, and secure digital wallet workflows.
- Implemented authentication and authorization using Spring Security, OAuth2 Google Login, JWT concepts, and role-based access controls for protected backend services.
- Improved API response time by 40% through Redis caching, optimized database queries, HikariCP connection pooling, and performance tuning.
- Built microservices following REST best practices, clean architecture principles, centralized Spring Cloud Config, and environment-specific configuration management.
- Integrated Visa and Mastercard sandbox APIs to support end-to-end payment workflow testing, card network routing, and standardized integration validation.
- Deployed, monitored, and troubleshoot services using AWS API Gateway, Lambda, Cognito, CloudWatch, Grafana, and Kibana in Agile Scrum delivery cycles.
- Developed service-to-service communication using Spring WebClient and wrote unit and integration tests with JUnit 5, Mockito, and WireMock.

Project: Digital Wallet - Host Card Emulation | Client: Reliance Jio

- Migrated legacy monolithic modules to Java 17 microservices to improve scalability, maintainability, and service-level ownership.
- Developed REST APIs for wallet registration, customer management, recharge workflows, device validation, and transaction support.
- Implemented Factory Design Pattern for payment routing based on BIN, card network, and integration-specific processing rules.
- Integrated Visa and Mastercard APIs and standardized error mapping to improve response consistency and user-facing payment messages.
- Created and executed unit and integration test cases to strengthen production stability and reduce regression risk.
- Resolved 300+ Jira tickets, QA issues, and production defects through RCA analysis, debugging, and cross-functional coordination.

PROJECTS

Microservices-Based E-Commerce Platform | Spring Boot, Spring Cloud, AWS, Docker, Redis, PostgreSQL, JWT

- Designed a scalable microservices architecture using Eureka service discovery, API Gateway, JWT authentication, and role-based access control.
- Containerized backend services with Docker and optimized application performance using Redis caching and distributed architecture patterns.

Serverless Car Booking Web App | AWS Lambda, DynamoDB, Cognito, SNS, S3

- Built a cloud-native serverless application using AWS Lambda for backend logic, DynamoDB for persistence, Cognito for authentication, and SNS for event-driven notifications.
- Designed scalable low-latency workflows using AWS managed services and event-driven architecture.

KEY ACHIEVEMENTS

- Improved API response time by 40% using Redis caching, query optimization, and backend performance tuning.
- Resolved 300+ Jira tickets, QA issues, and production defects across enterprise digital wallet systems.
- Integrated enterprise-grade Visa and Mastercard payment systems for tokenization, routing, and sandbox validation.
- Delivered cloud-ready backend services using AWS, microservices, monitoring tools, and Agile engineering practices.

CERTIFICATIONS

- AWS Certified Cloud Practitioner - Amazon Web Services (AWS)

EDUCATION

Bachelor of Technology (B.Tech), Computer Science and Engineering | Aditya University | 2019 - 2023
